

Alternative Folder Size Command

Sep 2025

Introduction

There are many ways to work out the size of folders, but this one that I learnt today seems to be perfect for my needs.

It is using the **du** (disk usage) command again, but with some different switch at the end.

You need to login as **root** (sudo -s) for this to work as you may end up with permission errors, depending on what folders you are searching.
