

Backup Tool

This is a plugin for DokuWiki which enables you to backup the most important parts of your site; this includes all of your pages, all old revisions, meta data, subscriptions, media files (your downloads), as well as your plugins and templates.

This is in case, for some odd reason, your host accidentally loses all your files; it's happened to me personally twice, on two different hosts since I began using DokuWiki- and backing up manually can be quite a nightmare.

Useage

From the Admin page, look for the **Additional Plugins** Section.

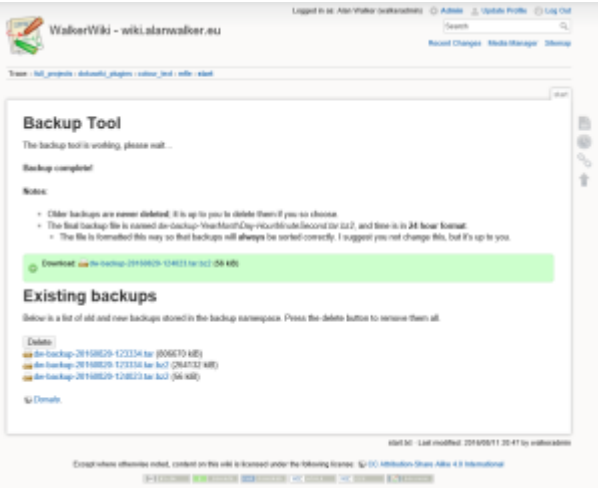

Select The **Backup Tool** Option.

Select the items to backup and click the **Create Backup** button.

Warning this may take some time, be patient.

When the backup is complete, you will see a window where you can download the backup.
