

Create the Key Pair

Aug 2017

If you have already manually created an EC2 Instance (and I hope you have, or this might not make any sense) you will already have a key pair. If you have just created a new account to test this then you will not yet have a key pair. You need to manually create a key pair as the Terraform script we are using here does not do this for you, it simply allows you to chose an existing key pair.

Resources

You are using the following Amazon EC2 resources in the EU West (London) region:

0 Running Instances	0 Elastic IPs
0 Dedicated Hosts	0 Snapshots
0 Volumes	0 Load Balancers
0 Key Pairs	2 Security Groups
0 Placement Groups	

Create Key PairImport Key PairDelete

Filter by attributes or search by keyword

You do not have any Key Pairs in this region.
Click the "Create Key Pair" button to create your first Key Pair.

Create Key Pair

Create Key Pair

Key pair name: NewSvr

CancelCreate

The screenshot displays the AWS Management Console interface for creating a key pair. The left sidebar shows navigation options like EC2 Dashboard, INSTANCES, IMAGES, ELASTIC BLOCK STORE, and NETWORK & SECURITY. The main content area is titled 'Create Key Pair' and includes a table of existing key pairs. The 'TestSvr' key pair is highlighted with a red box. Below the table, the details for the 'TestSvr' key pair are shown, including its name and fingerprint. At the bottom left, the 'TestSvr.pem' file is shown as a download option, also highlighted with a red box.

Key pair name	Fingerprint
TestSvr	c0:ef:62:96:ea:d7:2a:53:e5:08:c4:42:18:02:c0:30:6f:d4:bd:5d

Key Pair: TestSvr

Key pair name	TestSvr
Fingerprint	c0:ef:62:96:ea:d7:2a:53:e5:08:c4:42:18:02:c0:30:6f:d4:bd:5d

TestSvr.pem
