

Create the Key Pair

Aug 2017

If you have already manually created an EC2 Instance (and I hope you have, or this might not make any sense) you will already have a key pair. If you have just created a new account to test this then you will not yet have a key pair. You need to manually create a key pair as the Terraform script we are using here does not do this for you, it simply allows you to chose an existing key pair.

Resources

You are using the following Amazon EC2 resources in the EU West (London) region:

0 Running Instances	0 Elastic IPs
0 Dedicated Hosts	0 Snapshots
0 Volumes	0 Load Balancers
0 Key Pairs	2 Security Groups
0 Placement Groups	

Create Key PairImport Key PairDelete

Filter by attributes or search by keyword

You do not have any Key Pairs in this region.
Click the "Create Key Pair" button to create your first Key Pair.

Create Key Pair

Create Key Pair

Key pair name: NewSvr

CancelCreate

The screenshot shows the AWS Management Console interface. On the left, there is a navigation menu with categories like EC2 Dashboard, INSTANCES, IMAGES, ELASTIC BLOCK STORE, and NETWORK & SECURITY. The 'Key Pairs' link under the 'INSTANCES' category is highlighted with a red box. The main content area shows the 'Key Pairs' page with a table listing key pairs. The 'TestSvr' key pair is highlighted with a red box. The table has two columns: 'Key pair name' and 'Fingerprint'. The fingerprint for 'TestSvr' is c0:ef:62:96:ea:d7:2a:53:e5:08:c4:42:18:02:c0:30:6f:d4:bd:5d. Below the table, there is a section titled 'Key Pair: TestSvr' showing the key pair name and fingerprint. At the bottom of the console, there is a footer with '© 2008 - 2017, Amazon Web Services, Inc. or its affiliates. All rights reserved.' and links for 'Privacy Policy' and 'Terms of Use'. A 'Show all' button is also visible.
