

Gnome Tweaks

Mar 2025

Introduction

Every now and then, the writers of our favourite software, be it OS, Desktop, Application do something so mind bogglingly numb, that we just cannot move on until we get it back to how it used to be, when things just worked. And boy did this happen in the Gnome Desktop Environment. Let me explain!

So, what did they break you say? let me show you.

Okay, so the red box top right of the window gives it away, yes, they removed the Minimize and Maximize buttons, why? I have no idea, now I have to find the app I was using everytime because I can only close it, not minimize it.

What can we do about this I hear you say, well there is a customisation application for Gnome that lets you make all sorts of customisations that the Gnome team won't implement, or have removed called 'Gnome Tweaks'

Gnome Tweaks Installation

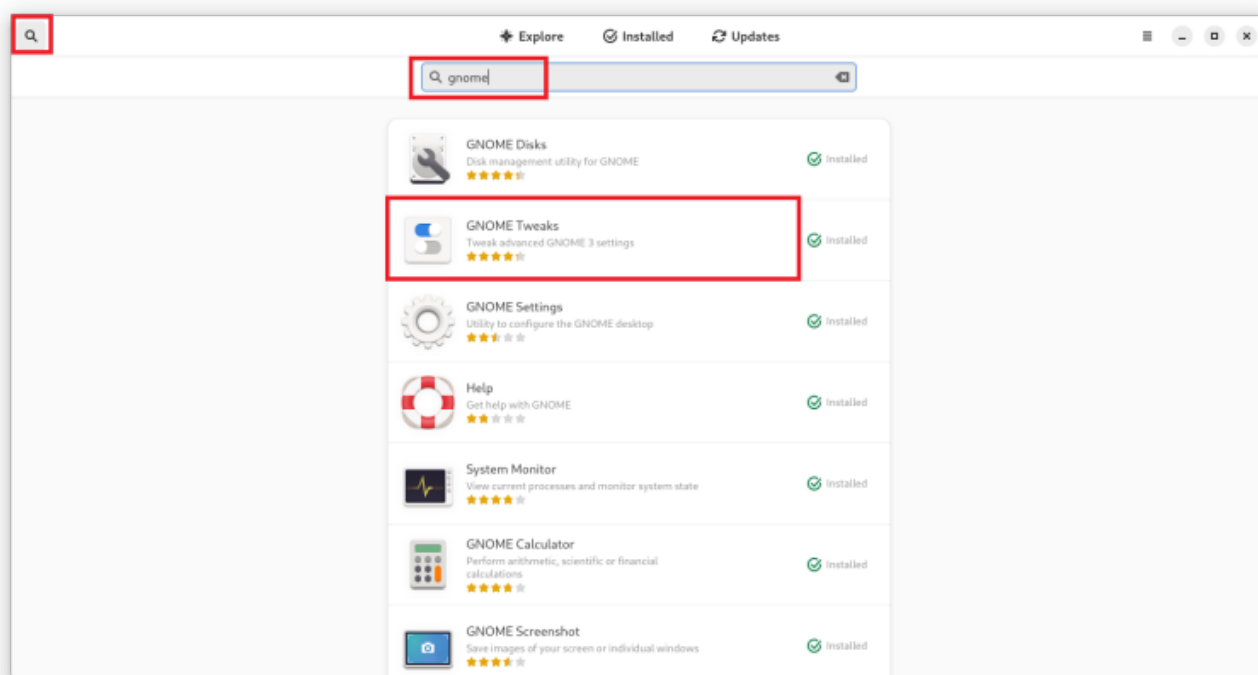

You can install Gnome Tweaks via a package manager or from a Terminal.

Package Manager

On Alma Linux 9 the Package Manager is called 'Software'

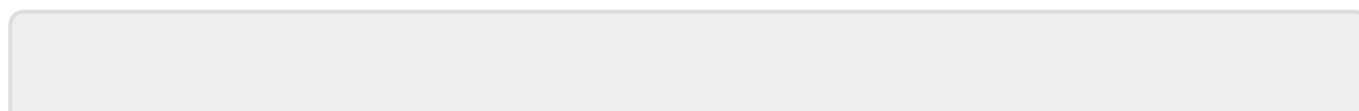

Once the software application is open, you can click the top left icon (magnifying glass)

Type in the search bar 'Gnome' and you will see a list of applications, one of which (should) be Gnome Tweaks.

Click this icon to install the software.

Install from Terminal
