

Remove input service from database

Jun 2017

This should be done from the Web UI, only use this option if the Web UI fails to remove a service.

To display configured Input services, use `db.input.find()`

To remove a configured service, use the following example. (you need to have logged in to the database first).

```
db.input.remove({ "public_id" : "pkgtest" })
```

This example is removing a failed service called `pkgtest`.

If successful you will get a confirmation similar to:

```
WriteResult({ "nRemoved" : 1 })
```
