

Show IP Address

There are several ways to look for an IP Address, and indeed to display the addresses, here are a few examples.

From the command line:

```
ifconfig
```

This will display all IP Addresses configured on all Interfaces, on a server this can be a long list that scrolls off the page, to stop the results scrolling of the page use:

```
ifconfig |more
```

If you know the interface name, you can use that to show the IP details of just that interface

```
ifconfig eth0
```
