

Use Watch for repetitive command line actions

Apr 2021

Overview

When you perform an action from the command line, it gets executed just once. So if you type **Date**, you will see the current time and date at the execution time of the command. But sometimes it is very useful if you are looking for a change to have your command line executed many times, and this can be achieved with a command called **Watch**.

Using Watch

Using <color
